# The All-in-One Feeding Station

*•Natural Eating •Quick to fill •Easy to Clean •Safe •Durable •Simple to fit*

*Installation Instructions*

*“The Natural Way to feed your horse”*

You will need the following tools to install and fit “The All in one Feeding Station” correctly:

- Electric Drill
- Screwdriver
- Minimum of 6 screws to secure the feeder to the wall
- Raw plugs if drilling into masonry
- An adjustable spanner
- A Spirit Level
- A marker pen
- A helper is always useful
- The buckets you intend to use inside The Feeding Station

30 MINUTES

Installation should take no longer than 30 minutes

### STEP 1 – Fixing the bucket straps to the feeder

Adjust & Attach your bucket straps before attaching your feeder to the wall

- Attach one end of the plastic strap by threading the bolt through the feeder and the plastic strap. ensure the bolt head is on the outside of the feeder.
- Wrap the strap around the bucket and secure using the other bolt. Use your bucket to measure how tight you require the strap
- If your bucket has a metal handle attached we recommend you twist it so that the handle sits underneath the rim of the feeder
- Tighten all bolts with your spanner.

### STEP 2 – Fixing The Feeding Station to the wall

- Position your “All in one Feeding Station” in your chosen stable corner.
- Place 10 cm off the ground to allow for seeds to drop out and enough room for a sweeping brush to fit underneath.
- Use a pen to mark the desired position on the stable wall.
- Drill holes through the edge of the feeder using your electric drill. We recommend you use at least 3 fixings per side of the feeder to securely fit to the wall. (As pictured below)
- Use the 6 large washers supplied to help secure the fixing point these will help stop the fixing head pulling through the plastic.
- Use your screws/ raw plugs simply drill the screws through your pre-drilled holes securing in place.

### For Breeze block & Brick walls

Avoid positioning the fixing holes directly into the mortar between the blocks. Unsure you secure the feeder directly to the block.

Fill and watch your horse enjoy!
